HTML - Elements not mentioned in video

1. - Meta- Represents metadata that cannot be represented by other HTML meta-related elements, like <base>, <link>, <script>, <style> and <title>.
2. <figure>-Represents self-contained content, potentially with an optional caption, which is specified using the <figcaption> element. The figure, its caption, and its contents are referenced as a single unit.
3. <section>-Represents a generic standalone section of a document, which doesn't have a more specific semantic element to represent it. Sections should always have a heading, with very few exceptions...

2. Website with HTML - Bloomingdales.com

5 elements used

<body>

The <a> HTML element (or anchor element),

The <**iframe**> **HTML element** represents a nested browsing context, embedding another HTML page into the current one.

The <**div**> **HTML element** is the generic container for flow content. It has no effect on the content or layout until styled in some way using

<img> embeds an image into the document

Favorite thing I learned this week is about all the different element used to construct an HTML page
